

## SKUNK SHOT

### Description

Skunk shot is an effective cat and dog repellent that utilises the natural and non toxic chemistry of the skunk in a waterproof gel, to provide a long term solution to problem cats and dogs and the mess they can make of your lawn or garden. Developed by Victoria University scientists, Skunkshot is effective in protecting cars, boats and outdoor furniture etc. from scratch marks, paw prints and territorial spraying.

### Uses

Skunk Shot is highly effective in deterring cats and dogs from a variety of areas including; ornamental and herb gardens, newly planted and grassed areas, garbage bags, car tyres and bonnets, aviaries, fish ponds and excremental areas.

### Why use Skunk Shot?

- The most potent deterrent on the market.
- Weatherproof and long lasting (3-4 weeks).
- Non toxic.

### Sizes & Variants

Skunk Shot  
Size: 20 gram Gel

Skunk Shot Scatter  
Size: approx. 250ml

### Instructions

Do not use the pointed cap of the tube to puncture the seal. Use a small nail instead and then dispose of it. Use the cap to seal the tube after use. Skunkshot is designed for use outdoor. Never open or use Skunkshot indoors. After use, keep the tube in the packaging supplied. The sachet will soak up any residual smell.

Apply small dabs of Skunkshot on anything convenient, such as rocks, branches, plant pots or directly onto the grass or lawn. If possible avoid applying Skunkshot to porous surfaces. On mown areas, golf tees can be pushed down with a dab of Skunkshot placed in each tee. Generally, 4 small smears of 1-5mm per square metre will be effective. Skunkshot needs to cover the entire area you wish to protect, not just the border.

Results may vary against your own pet, as they may associate the smell with their owner.

### Storage

After opening Skunkshot, the tube should be stored with the activated charcoal sachet provided in the screw top container. Dispose of the used tube and container by wrapping in paper or dispose before placing it in the garbage bin.

### Health and Safety

If you accidentally get Skunkshot on your skin or clothing, first wash with soap and warm water. The smell can be neutralised by applying a weak solution of household bleach (a capful in half a bucket of water), and then rinsing with clean water.
