

## WARRIOR TRAP

### Description

A lightweight effective kill trap for the control of possums and feral cats.

### Uses

The Warrior Trap is used by professional trappers and animal controllers in rural outdoor areas. The trap can be used on its own or in tandem with other programs such as rodent control.

### Why the Warrior Trap?

- A lightweight and compact trap.
- Complies with animal welfare guidelines.
- Trap can be placed in situ with a light or heavy set.
- High quality construction provides durability.
- All traps come with long life baits.
- Easily set by all age groups.

### Safety

- Never place the set trap on the ground.
- Be aware of non target species. Where there is stock present, traps should be 2m above the ground.
- Where possible, set the traps in elevated positions, on trees, where activity is evident.
- Traps should be checked weekly.
- Keep well away from children at all times.

### Sizes and Variants

This is a multi use unit and can be purchased in bulk or as a single unit. Long life, water proof baits sold separately.

### Site selection

**Fruit Trees:** Any trees that have fruit will be visited by possums.

**Nut Trees:** Chestnut and Walnut trees are favourites of possums.

**Palatable Foliage:** Spring foliage of willows, poplar and liquidamber will be singled out by possums.

**Pollen Trees:** If you have pine on your property, possums are drawn to them during pollination around August.

Trees that possums visit regularly will often have claw marks and droppings under them. Certain sites may continuously give results and become 'hotspots'.
