

Possum Control - Bait Station

A light weight bait station for securing and holding a variety of possum baits.

Uses

A robust bait station designed for use by professional pest controllers, foresters, farmers, life style block owners, horticulturalists/orchardists, lifestyle block owners and golf courses.

Why the Bait Station?

- Easy placement as this flat-backed bait station has flexible tabs on top and bottom with pre-drilled holes for nailing to fence posts or trees.
- The red filler cap has a positive bayonet action that only requires a quarter turn to fasten, and is designed to prevent water entry.
- Bait remains protected from adverse weather conditions.
- Allows poison baits to be placed out of the reach of stock and other non target animals.
- Will hold 1.5kg of FeraFeed, Feracol, Feratox and a variety of cereal baits.
- The bright yellow/red colour combination may be attractive to the inquisitive possum but is also visible from a distance so stations are not missed when bait levels need to be checked.
- At the animal entry point there are horizontal metal wires which are designed to keep bait (particularly cereal based pellets) from falling out of the station.

- When poisons are not an option, the bait station can be loaded with FeraFeed Pellets or Paste and once possums are readily feeding a Warrior or Timms Trap set beneath.
- A warning logo is moulded into the plastic.
- Can also be used to present some rodent baits.

Sizes and variants

Available singularly or in boxes of 10 and cost \$23.20 each.

FeraFeed Pellets 5kg pail \$36.00; 10kg pail \$70.00.

FeraFeed 213 Paste 4.5kg pail \$29.00; 10kg pail \$55.00; 20kg pail \$99.00.

FeraFeed Smooth in a Tube 1.2kg \$9.95.
