

RATABATE® APPROVED FOR USE IN BUILDINGS

RatAbate has been approved by NZFSA for use in a variety of animal processing premises for the control and eradication of rats.

This approval enables RatAbate to be used in all meat sector premises, and in many others including game, wet fish, shellfish, poultry, ostrich and emu, bee and honey, egg, animal feeds, secondary processors, dual operator butchers, rendering, hide skins and stores.

Our approval code Type C means RatAbate may only be used in premises according to the requirements of a vermin control programme which has been documented to relevant NZFSA legislation; it may be used in food areas provided there is no exposed product or food ingredient present in the room; and it must be removed from edible areas before processing operations commence.

The advantages of using RatAbate are twofold said Lyn Nicholls, Sales and Marketing Manager.

1. We offer a bait that is extremely palatable. It is a preferred food source even in situations where there are other grain food options; and
2. RatAbate is a first generation anticoagulant which significantly reduces the risk of residues in the environment.
