

New RatAbate® Product

CONNOVATION

Connovation are developing RatAbate® paste in new packaging in conjunction with Glen Falconer, Biosecurity Officer of Greater Wellington Regional Council.

The non-toxic trials have been conducted (in part) within the Wainuiomata/Orongorongo water collection area mainland island (1200ha) where an intensive multi-species pest control regime is occurring. Food sources for rodents are abundant through this area therefore the high palatability of RatAbate with its unique peanut butter formulation will be a real advantage.

This bait development work mostly done at our Auckland premises has gone through various stages to now where we have bait enclosed in a tube-shaped casing that can easily be skewered onto metal securing rods inside bait stations. All packaging is bio degradable and readily eaten by rodents.

Small RatAbate® sausage

Large RatAbate® sausage

Baits will become available once registration and labeling is completed.
